SUMMARY

Backend and distributed systems engineer with hands-on experience building real-time data pipelines, scalable cloud-native services, and agentic AI systems. Passionate about large-scale infrastructure, low-latency architectures, and algorithmic problem solving.

EDUCATION

Amrita Vishwa Vidyapeetham

B.Tech, Computer Science and Engineering — CGPA: 8.85 / 10.0

Coimbatore, India

Aug 2023 – May 2027

EXPERIENCE

Sony SSUP

Full Stack Web Developer, Research Intern

Coimbatore, India

Jan 2025 – Sep 2025

- Designed and deployed a **cloud-native IIoT data pipeline** ingesting high-throughput industrial sensor streams, integrating **PostgreSQL** (transactional), **InfluxDB** (time-series), and **GraphDB** (relationship analytics) for intelligent solar dryer operations.
- Built **production REST APIs** with **Redis** caching and Server-Sent Events (SSE) for sub-second real-time data delivery; reduced redundant DB calls by ~60% via cache-aside strategy.
- Optimized **distributed data pipelines** for high-throughput sensor workloads; contributed to scalable Docker-based deployment with public access.

Tech: Next.js, Node.js, TypeScript, REST APIs, Redis, SSE, PostgreSQL, InfluxDB, GraphDB, Docker

PROJECTS

ERFOLG — Autonomous AI Career Companion [GitHub]

Dec 2025 – Feb 2026

- Architected a **multi-agent agentic AI system** (Think-Plan-Act) for automated skill-gap analysis, personalized roadmap generation, and application tailoring with mock interview prep.
- Orchestrated agents via **LangGraph**, with **Pinecone** vector search for semantic retrieval and **Supabase** for persistent user state; rejection feedback loop enables continuous model improvement. **4th Place, AI Verse Hackathon 2025**.

Tech: Python, FastAPI, LangChain, LangGraph, Pinecone, Supabase

LekhaFlow — Real-Time Collaborative Canvas [GitHub]

Jan 2026 – Feb 2026

- Built a high-performance collaborative whiteboard supporting concurrent multi-user editing at **sub-100ms latency** using **WebSockets** and **CRDT-based** conflict resolution for eventual consistency.

Tech: Next.js, Supabase, WebSockets, CRDTs

Paper Scrape — Distributed Research Discovery Engine [GitHub]

May 2025 – Present

- Engineered a **Go** backend with distributed acquisition pipelines using **Kafka** for message queuing and **Playwright** with proxy rotation for resilient large-scale web scraping.
- Designed a **multi-store architecture** (Redis + GraphDB + PostgreSQL) for fast retrieval, relationship modeling, and metadata caching across thousands of research papers.

Tech: Go, Kafka, Playwright, Redis, GraphDB, PostgreSQL

IntelliPdM — Edge-Cloud Predictive Maintenance [GitHub]

Jun 2025 – Aug 2025

- Built a hybrid **edge-cloud IIoT framework** for real-time predictive maintenance using **LightGBM**, **LSTM**, and **DQN** scheduling; achieved **40% downtime reduction** and **43% cost savings** via MQTT-based sensor streaming.

Tech: Python, LightGBM, LSTM, DQN, MQTT, Edge Computing

TECHNICAL SKILLS

Languages: Go, TypeScript, Python, Java, C/C++

Cloud & DevOps: AWS, Docker, Kafka, MQTT, Git, Linux

Frameworks: Node.js, Next.js, React, FastAPI, LangChain, LangGraph **Databases:** PostgreSQL, MySQL, MongoDB, InfluxDB, Redis, GraphDB, Pinecone

Concepts: Distributed Systems, Large-Scale Data Pipelines, Agentic AI, CRDTs, Event-Driven Architecture, Edge Computing

ACHIEVEMENTS & CERTIFICATIONS

- 4th Place — AI Verse Hackathon 2025** for innovation in Agentic AI workflows (ERFOLG project)
- LeetCode:** Contest Rating **1644** — **Codeforces:** Rating **1285**
- Google Cloud Certified:** Intro to GenAI — Develop GenAI Apps with Gemini & Streamlit — Prompt Design in Vertex AI
